

BEFORE THE BOARD OF  
NATURAL RESOURCES AND CONSERVATION  
OF THE STATE OF MONTANA

IN THE MATTER OF APPLICATION FOR	)	
RESERVATION OF WATER NO. 10,005-r42KJ	)	FINDINGS OF FACT AND CON-
BY THE ROSEBUD CONSERVATION DISTRICT	)	CLUSIONS OF LAW OF APPLI-
	)	CATION NO. 10,005-r42KJ

The above-entitled matter came on regularly for hearing starting on or about September 6, 1977, in Billings, Montana, before the Montana Board of Natural Resources and Conservation and its duly appointed Hearing Examiner, James Driscoll. The Applicant appeared by and through its counsel of record, Gary Spaeth. The Montana Department of Natural Resources and Conservation appeared by and through its counsel of record, Richard Gordon. The Montana Department of Fish and Game appeared by and through its counsel of record, F. Woodside Wright and Clayton Herron. The Montana Department of Health and Environmental Sciences appeared by and through its counsel of record, Mona Jamison. Witnesses were duly sworn, and oral and documentary evidence was introduced.

The Board, having read and fully considered the complete record, makes the following Findings of Fact and Conclusions of Law relating to the Rosebud Conservation District, Application No. 10,005-r42KJ:

### FINDINGS OF FACT

1. The Rosebud Conservation District has applied for a reservation of 94,129 acre-feet of water per year (af/y) with a maximum diversionary flow rate of 585 cubic feet per second (cfs) to be used to irrigate 37,360 acres. On the average this request is for a diversion of 2.52 acre-feet per acre with a maximum flow rate of 1 cfs per 63.86 acres. Water is requested from the Yellowstone River, Tongue River, Rosebud Creek and Armells Creek for the year 2000. (Application No. 10,005-r42KJ).

#### Findings Related to the Purpose of this Reservation (89-890(3)(a)).

2. The purpose of the reservation is to insure water availability and adequate streamflow for the future agricultural needs of the Rosebud Conservation District. (The Rosebud Conservation District Application at page 4).

3. It is established to the satisfaction of the Board that a purpose of the reservation has been shown. (Finding 2).

4. A reservation of water is needed because it will secure a priority date for future developments that is earlier than the priority dates such developments would have if permits were obtained immediately before construction or use began (Rosebud Conservation District, Application No. 10,005-r42KJ, p. 5).

5. The reservation is needed because there is a proliferating world-wide demand for food, which is dependent on sufficient water availability. (The Rosebud Conservation District Application at page 4).

6. A reservation is needed because there is competition for water in the Yellowstone River Basin which may affect the availability of the Applicant to obtain a water right by permit in the future. This, in turn, will also help promote the necessary planning. (The Rosebud Conservation District Application at page 5).

7. It is established to the satisfaction of the Board that the need for a reservation of water has been shown (Findings 4 and 5).

Findings Related to the Amount of Water Necessary for the Purpose of the Reservation (89-890(3)(c)).

8. The amount of water necessary for this reservation is the amount required to irrigate the number of acres described in this application that can reasonably be expected to be completed by the Rosebud Conservation District by the year 2000 (EIS).

9. The payment capacity consists of total farm revenue minus all costs except irrigation water costs and is the maximum amount a water user could pay for water while maintaining a profitable operation (Rosebud Conservation District, Application No. 10,005-r42KJ, p. 22).

10. The cropping pattern by percent is 19% for grain and 65% for hay, 5% for silage and 11% for cash crops in the Yellowstone Basin for a maximum capacity of \$170.00 per acre, and 24% for grain, 59% for hay, 3% for silage, and 14% for cash crops in the Tongue River Basin with a maximum payment capacity of \$186.00 per acre. (The Rosebud Conservation District Application at page 24).

11. A 75% on-farm irrigation efficiency was assumed for sprinkler irrigation and 55% for flood irrigation. (The Rosebud Conservation District Application at page 11).

12. Conveyance losses were estimated by formula and included in the diversionary requirement needs. (The Rosebud Conservation District Application at page 11).

13. Peak diversion requirements were calculated using recommended peak consumption use rates for alfalfa divided by the on-farm efficiency. (The Rosebud Conservation District Application at page 11).

14. The calculated values for alfalfa equals 11 gpm per acre-foot for flood irrigation and 7 gpm for side-roll sprinklers. In the case of center pivots, the peak rate was reduced to 5.5 to 6 gpm per acre to more closely match the

infiltration rate of heavy soils to the application rate of system. (The Rosebud Conservation District Application at page 11).

15. The system will not meet peak plant consumptive uses, but using the soil profile as a moisture reservoir, the system is sized somewhat below that required to meet peak consumptive uses. (The Rosebud Conservation District Application at page 11).

16. The diversion requirement ranges from .49 cfs per 40 acres to 1.00 cfs per 40 acres with an annual requirement ranging from 2.15 acre-feet per acre to 3.26 acre-feet per acre for an average of 2.52 acre-feet per acre with a maximum flow rate of 63.86 acres per 1 cfs. (The Rosebud Conservation District Application at page 12).

17. All systems were designed to operate simultaneously, even on large systems in lieu of a rotation system. (The Rosebud Conservation District Application at page 11).

18. Using irrigation factors of 2.52 acre-feet per year of water per acre, and 63.86 acres per cfs, a reservation of water sufficient to irrigate 34,525 acres would be 87,003 acre-feet with a maximum diversionary flow of 540.7 cfs.

19. It is established to the satisfaction of the Board that 87,003 acre-feet per year with a maximum diversionary flow rate of 540.7 cfs is the amount of water necessary for the purpose of the reservation to the year 2000.

19(a) There is no water available for the proposed irrigation that would take water from Rosebud and Armells Creeks, and Rosebud Conservation District has no plans to develop storage on these creeks. (Rosebud Conservation District, Application No. 10,005-r42Kj, pp. 15 and 18).

19(b) It has not been established to the satisfaction of the Board that there is a need for reservation of water of any amount on Armells Creek and Rosebud Creek.

19(c) A reservation of water has been granted to the Department of Natural Resources with the condition that they provide the Rosebud Conservation District's reservation request from the Tongue River to the Rosebud Conservation District of 7,144 af/y for 2,835 acres.

19(d) Because of the Department of Natural Resources' reservation and its conditions, there is no need for a reservation of any amount of water in the Tongue River for the Rosebud Conservation District.

Findings Related to the Public Interest (89-890(3)(d)).

20. The reservation will contribute economically to the public interest. (The Rosebud Conservation District Application at page 7).

21. The development of future irrigation projects in Rosebud County and beneficial use of water will create jobs and increase the tax revenues. (The Rosebud Conservation District Application at page 7).

22. From 1960 to 1970, the rural population in Rosebud County declined 2.5 percent. A major reason was a lack of job opportunities (Draft EIS, Vol. 1, p. 101).

23. The development of new pumping facilities, ditches, canals, sprinkler systems, and other diversions will contribute to the economic stability of the County. (The Rosebud Conservation District Application at page 8).

24. New irrigation would increase income in Rosebud County, both for the farmers who would install the systems and for the local businesses that would enjoy increased sales resulting from the increase in agricultural income. New irrigation would increase the number of both on-farm and off-farm jobs. (Draft EIS, Vol. I, p. 156).

25. The Rosebud Conservation District has an established plan for completion of the proposed facilities which will put reserved water to use by the year 2000 (Rosebud Conservation District, Application No. 10,005-r42KJ).

26. By reserving water for future beneficial use, individual ranchers and farmers have a more favorable timetable in which to accumulate the capital needed to finance, to take maximum advantage of favorable changes in the agricultural market, or to utilize the most contemporary technology available in water delivery systems. (Rosebud Conservation District Application at page 5).

27. The plan of the Rosebud Conservation District is not speculative and is documented to the highest degree of detail possible. (Rosebud Conservation District).

28. The reservation shall be put to use within reasonable diligence and the plan includes a bona fide intent and ability to use the water reserved as projected.

29. Detailed planning of district projects will be accomplished through funds made available by the Montana Legislature or Rosebud County mill levy. The Department of Natural Resources and Conservation's Technical Assistance Program will also be used. (The Rosebud Conservation District Application at page 3).

30. The Board is satisfied there will be progress toward completion of construction of the facilities with reasonable diligence according to an established plan which includes the economic feasibility of each project, a soils and land classification analysis showing the suitability of lands to sustain irrigation, and possible sources of funding.

31. A reservation sufficient to irrigate 34,525 acres is in the public interest because it is reasonable to expect that the Rosebud Conservation District will irrigate an additional 34,525 acres by the year 2000.

32. It is established to the satisfaction of the Board that the reservation of 87,003 af/y with a maximum diversionary flow rate of 540.7 cfs to be used for irrigation is in the public interest and that there will be progress toward completion of the facility and accomplishment of the purpose with reasonable diligence in accordance with an established plan.

33. It is further established by the Board that a condition of the Department of Natural Resources' reservation of water in the Tongue River is to supply the Rosebud Conservation District with 7,144 acre-feet and a peak flow rate of 44.4 cfs to irrigate 2,835 acres.

#### CONCLUSIONS OF LAW

1. Chapter 8, Title 89, R.C.M. 1947, and in particular, Section 89-890, R.C.M. 1947, authorize the adoption by the Montana Board of Natural Resources and Conservation of orders reserving water to qualified applicants for reservation of water.
2. If ordered adopted, a reservation must be ordered adopted in accordance with Chapter 8, Title 89, R.C.M. 1947, and any rules adopted thereunder.
3. The Applicant, Rosebud Conservation District, is a political subdivision of the State of Montana and as such is entitled to apply to reserve water within the State of Montana in accordance with 89-890, R.C.M. 1947, and any rules adopted thereunder.
4. All pertinent statutes and rules of the State of Montana have been adhered to in review of this reservation application, both by the Montana Department of Natural Resources and Conservation and by the Montana Board of Natural Resources and Conservation.
5. Based upon the above Findings of Fact, and specifically based upon any condition, limitation, or modification of the full application appearing in said Findings, all pertinent criteria delineated in Section 89-890, R.C.M. 1947, and any rules adopted thereunder providing for the adoption of an order reserving water have been met.
6. Nothing found herein has bearing upon the status of water rights claimed by the Applicant other than those herein newly applied for, nor does anything found herein have bearing on the status of claimed water rights of any other party except in relation to those rights herein newly applied for, to the extent necessary to reach a conclusion herein.
